Professional Summary

Recent Computer Science graduate with strong foundations in algorithms, data structures, and backend engineering. Experienced in Python, SQL, and JavaScript, with demonstrated strength in problem-solving through continuous algorithm practice and delivering efficient engineering solutions.

Skills

Languages: Python, JavaScript, SQL, Java, Node.js, React, TypeScript, PHP, HTML, CSS
Databases: MySQL, SQL, MongoDB, Relational Database Design, ETL Processes, AirTable
Tools: Git, GitHub, Apache, Eclipse, Visual Studio, Xcode, SQLite Studio, Microsoft Tools

Work Experience

Database Developer Claribase — Vancouver, BC
May 2023 – Dec 2024

- Engineered advanced automation systems using AirTable's JavaScript scripting environments to eliminate manual workflows, reducing operational effort by over **60%** and generating **\$100K+** in yearly client savings.
- Developed custom AirTable Blocks using the **React-based Blocks SDK**, building embedded React mini-apps that extended platform functionality and operated on real-time AirTable data.
- Designed scalable **relational database schemas** and implemented end-to-end **ETL pipelines** across AirTable and MySQL, supporting data cleaning, normalization, migration, and multi-system integrations to improve accuracy and reliability.
- Optimized automation performance by profiling slow operations, restructuring data access patterns, and improving workflow execution speed across multiple high-volume databases.

Database Administrator Intern Thermo Fisher Scientific — Mississauga, ON
Sep 2022 – Dec 2022

- Created a **VBA + SQL** workflow that significantly reduced repetitive data entry effort by **75%**.
- Maintained and queried the company's **database** to interpret funding and purchase activity.
- Identified and documented recurring **data quality issues** and prepared monthly reports for stakeholders.

Computer Science Teaching Assistant Wilfrid Laurier University — Waterloo, ON
Sep 2021 – Apr 2022

- Mentored **15+** **students** weekly across lab sessions and office hours, helping them understand **Python/Java OOP**, **VBA**, and **SQL**.
- Students regularly demonstrated a measurable improvement of over **30%** in assignment and exam outcomes.

Projects

Replay.gg — AI Powered League Coaching (AWS & LoL Hackathon)  Open Project

- Built a full-stack analytics app using **Node.js**, **TypeScript**, and **AWS Bedrock** to generate personalized AI coaching summaries from Riot Games data.
- Created multi-segment **AI insights**, champion recommendations, and a **Spotify Wrapped**-style recap using structured **JSON pipelines**.
- Designed responsive dashboards using **React** and **Tailwind CSS** to visualize player performance.

AI Traffic Simulator (WIP)  Open Project

- Developing a real-time traffic simulation using **Python + Pygame** with **AI-driven** light control.
- Implementing systems for **car movement**, **light synchronization**, **collision prevention**, and **reinforcement learning**.

Productivv (WIP)  Open Project

- Built a browser extension frontend using **HTML**, **CSS**, and **JavaScript**.
- Developing a backend using **Node.js + Express** with **MongoDB Atlas** for data logging.
- Designed **MongoDB schemas** and integrated **Mongoose** for real-time tracking.

Education

Bachelor of Science, Computer Science (Minor: UX Design) CGPA: 3.5/4.0 Wilfrid Laurier University
Sep 2020 – Aug 2025

Relevant Courses: Algorithms Design and Analysis, Data Structures, Foundations of Computing, Operating Systems
Certifications: AWS Cloud Practitioner (In Progress)
